

Requesting non-Open Distribution List TXCCR Cell Lines and Xenografts

The TXCCR does not encourage requests for cell lines prior to those lines being thoroughly characterized. However, we realize that some investigators may have needs that can be met uniquely by the TXCCR, so a process has been established to make available cell lines and patient-derived xenografts (PDXs) from TXCCR prior to their being placed into open distribution.

This same process will be used to share panels of cell lines and/or PDXs with investigators who may wish to collaborate with the TXCCR and take a lead in characterizing a particular set of lines, or participate with TXCCR investigators on such characterization.

TTUHSC has developed an MTA to enable distribution of the cell lines and PDXs which is available on the TXCCR website (www.TXCCR.org)

Prior to requesting any cell lines or xenografts not on the TXCCR web site as being in open distribution, investigators should contact the TXCCR PI:
